Foam Dressing Kit With Port

RENASYS[®]-F/P – the standard of choice

Effective wound care begins with choosing the most appropriate treatment. The right therapy can accelerate healing and put patients on the road to recovery faster. Relying on proven tools and techniques can help you care for your patients confidently and effectively.

Smith & Nephew offers the RENASYS-F/P Dressing Kit, a reticulated, open-cell, polyurethane foam dressing designed for Negative Pressure Wound Therapy (NPWT). Foam is a familiar, industry-standard dressing for NPWT, making it the optimal choice for a wide variety of wounds.

In addition, as a company offering both foam and gauze interfaces for NPWT, Smith & Nephew gives you the flexibility to exercise your full clinical judgment based on the needs of the patient, the wound and the care setting.

Why foam?

Recognized industry standard

Foam is the most commonly used dressing for Negative Pressure Wound Therapy. It is easy to apply and appropriate for a wide range of wound types and sizes.

Proven efficacy

Foam is proven to address the common treatment goals associated with NPWT including reductions in wound dimensions, exudate levels and wound odor, and an improvement in the quality of the wound bed.¹

Designed for healing

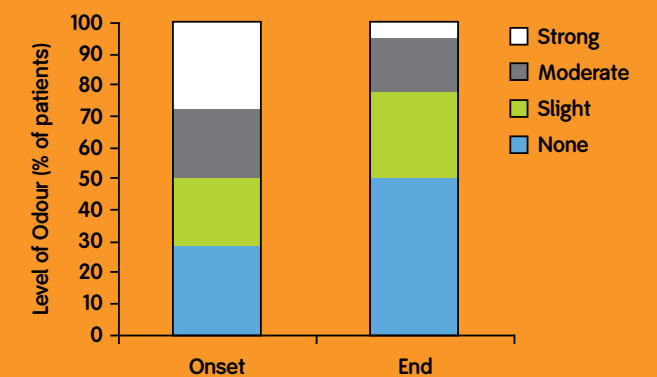

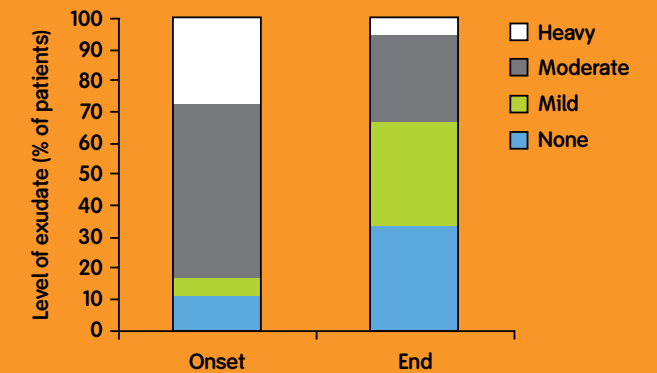

The hydrophobic, open-pore properties of the RENASYS Foam Dressing help remove exudate and promote tissue granulation at the cellular level. Foam evenly distributes negative pressure at the wound site, helping to draw wound edges together and prepare the wound bed for closure.

Flexibility and simplicity

As part of the complete RENASYS[®] system, the RENASYS-F/P Dressing Kit works in conjunction with all our NPWT devices, enabling you to customize treatment based on the needs of the individual patient. Two different pump options and related accessories offer flexibility in treating a wide variety of wounds, while intuitive design features make them easy to operate.

- The **RENASYS GO** device combines portability and easy operation to maximize patient comfort, mobility and convenience.
- The **RENASYS EZ** device offers a solution for high volume output wounds and flexibility in treating a variety of acute and chronic wounds.
- The **RENASYS Port** accessory provides a convenient, streamlined approach for foam and gauze applications.

Clinical and support services

Smith & Nephew is committed to supporting caregivers and their patients through the entire continuum of care. We partner with national acute and home care distributors to provide a wide range of clinical services, so you have access to the expertise and resources you and your patients need at every point of care.

Product and clinical support

- Product instructions and clinical application techniques available on website
- Product manuals, NPWT clinical guidelines and quick reference guides
- Dedicated team of home care specialists
- Clinical in-servicing and continued product training
- Patient education and support

Customer and patient hotlines

- 24/7 clinical and patient hotlines
- Customer Care and Technical Support call centers

Logistics and fleet management

- Patient equipment delivery, set up, service and maintenance for acute and home care
- Third-party billing management

In addition, we offer education and information about the therapeutic area of wound management. From interactive presentations and education modules to peer learning opportunities, Smith & Nephew provides ongoing professional development tools to expand your understanding of wound care trends and treatments.

Clinical education

- Peer-to-peer learning through our National Science Summit Program
- Accredited online education modules
- Educational videos and webcasts

With over 150 years of experience in advanced wound care, Smith & Nephew is an industry leader providing innovative solutions to meet the needs of chronic, acute and traumatic wounds across all care settings.
